New in SWF Krantechnik product range: the hand chain block CRAFTster

In addition to the electric hoists and crane components SWF Krantechnik offers now manual lifting equipment also. The hand chain block CRAFTster expands the wide product range of the Mannheim based hoisting specialist.

CRAFTster is designed for loads from 250 kg up to 20,000 kg. Upper hook, 3 meters lifting height and overload protection (except the 250 kg type) are standard. Individual lifting heights can be realized. Push trolley or chain driven trolley are available as option. An explosion proof for loads up to 20,000 kg is available too. A beam clamp up to 5,000 kg allows a flexible mounting of the hand chain block.

Due to the compact design and the minimum hook dimensions CRAFTster ensures optimum use of space. The hoists are handy for transportation to site of operation. The low unit weight makes a gentle and ergonomic installation possible.

For heavy duty and outdoor use SWF Krantechnik offers the type CRAFTster **GT** for loads up to 5,000 kg. Main features are a chain nut with ball bearings and epoxy powder coating with 200 µm thickness.
